

Tech Monger Database Design – sample images

Here are some sample screenshots of a recent bespoke database solution that I have delivered.

Screenshot 1 – contact details data entry view

Taking the company logo (top left corner) as a starting point, I have used the colour scheme to design an attractive, easy to navigate database system. Clicking on any of the tabs will display related information from a number of the other database very clearly without having to leave the current database. The orange buttons to the side help the end-user to easily operate the key functions of the database.

Using the same colour scheme throughout, the invoices database provides the capacity to email invoices and to register payments. The database also automatically flags up when invoices are overdue and enables the user to email a reminder to the customer along with a PDF copy of the invoice.
